Shall Miss Frances Vote ? DIFFICULTIES IN THE WAY OF BECOMING A GOOD CITIZEN.

[From the New York Examiner and Chronicle.]

Miss Hester and Miss Frances Willett lived on the very edge of the suburbs. Indeed, their house lay across the division line. As the front door actually opened upon the road that belonged to Swanset, Miss Hester considered that she lived in Swanset, and did pay her taxes there. But Miss Frances's room was in the back wing of the house, and looked out upon the bit of Swanset that had been annexed upon the bit of Swanset that had been annexed to Boston, with the rest of that region. She chained a preference to living in Boston. She presented, as she instructed Miss Frances of present of the state of the sta claimed a preference to living in Boston. She felt a sense of protection in the policeman, and had an idea that he might keep the boys off their cherry tree, and be a firm rock in the case of burglars. Then she thought it would be pleasant to have the nephews come to stay with them, in order that they might go to a Boston school, and share the advantages of a city education in the new brick grammar school established just over the line. There was a back door, with a porch that opened up.

Boston school, with a porch that opened up.

Boston school established just over the line. There was a back door, with a porch that opened up. school established just over the line. There was a back door, with a porch that opened upon Boston, as fine as the front door, and Miss Frances always used this—it had a bell. The Swanset front door had an old-fashioned knocker. Miss Hester did not think so much of these city advantages. She was not at all afraid of burglars, and had no idea of being indebted to a policeman. For many years she had slept with her front door unlocked, Once when there had been an alarm of burglars in the neighborhood, she had set all her silver on the broad front stair opposite the front door.

"I don't want to have them hunting around the house in the middle of the night!" she explained; "like as not they would chloroform Frances, or make her tell where the key was.

plained; "like as not they would chloroform Frances, or make her tell where the key was. I had rather make it easy for them." She did, Frances, or make her tell where the key was.

I had rather make it easy for them." She did, on this occasion, take up to bed with her a little old-fashioned silver teapot, of a grandaunt's of her own name.

So Miss Frances went down to her niec far, far down beyond Mt. Desert in Maine such a quiet place on the bay, where the ground go on with their reading, and have

Nor did Miss Hester think much of the school lage, and there were boating parties, sail

Nor did Miss Hester think much of the school advantages. She thought they were counterbalanced by having so many schoolboys turned on to the cherry tree. Of course she could not now let the doers go unlocked, with the city line passing through the house, but she had strong bolts put on, and went around every night to see the window-fastenings herself.

Not that Miss Hester was at all strongminded herself. She believed in a supremacy CITY OF NANKIN To our consignment, from Glasgow, with a full carge of General Merchandise, which is Now Being Offered to the Trade minded herself. She believed in a supremacy of men in certain things; she had a man to minded herself. She believed in a supremacy of men in certain things; she had a man to chop the wood, and boys to take in the coal, and was very much shocked when she heard that the little girls in Egypt "took in" the coal for the Nile steamers. She put all her business matters into the hards of her brother, having no idea that women could be expected. VERY LIBERAL TERMS. DRY GOODS having no idea that women could be expected to understand about such things. Indeed, she was thankful that there was a sex that could in large type that you always were to belie pretend to master the complicated system of banks. Men had invented them, and if they were willing to wrestle with their intricacies, GALVANIZED ROOFING. she was not one to relieve them of the burdens they put upon themselves. She could fill in a check, and Miss Frances could go into town was pleasant to go across to St. Andrew's, the Oness's description and bury restricts.

the night before, and would have made her will, if it had not already been signed and sealed. But it was long since she had been arise a pricking in that organ. It was will, if it had not already been signed and sealed. But it was long since she had been into town. Poor Miss Hester, she was a little blind, and very absent-minded, and the last time, on her return, she had mounted into the back of an express wagon, taking it for the horse cars, and had not discovered her mistake till she came to hand out her ticket to the astenished expressman, while he stopped to lift off a trunk from the walk at Cambridge-port. Of course it would not do for Miss Hester to go into town alone again, and she never wes willing to go with a guardisn. She land always been the head of their little family. It was left her followed her, set off for a walk when she d to go into town alone again, and she never wes willing to go with a guardian. She had always been the head of their little family. It was been the head of their little family. It was she who had the property, for it was left her by the grand-aunt whose name she bore, and whose silver feapot she valued. She was will high to share this fortune with her sister, but she would not give her the responsibility of it. There was the trouble of paying the taxes. Frances was "a young thing," at least ten he drew near her, and then again how looked down! How earnest there talk seen Frances was "a young thing," at least ten he drew near her, and then again how a years younger than hersell, and what could looked down! How earnest there talk seen

able committee men."
"Because a man, especially a young man, has nothing better to do than vote," replied Miss Hester. "It is just what they are equal to. You have better things to occupy your

time with. This very minute you might be finding out whether those Norfolk strawber-ries, that man is crying at 15 cents a box, are Bertha cried. "You have not lamed you foot?" ries, that man is crying at 15 cents a box, are written, I don't believe your nephew or the next generation will thank you, even if you have chosen a 'Moses' in the school computer.'

Dear Aunt Family, what is the matter foot?"

Aunt Family murmured inaudibly, "It next generation will thank you, even if you have chosen a 'Moses' in the school computer.'

"Why should I vote for a Moses on the committee." asked Miss Frances, laughing, "why not some sensible woman, you or Mrs. Sturtevant. Miss Frances ran off to the strawberry man to avoid Miss Hester's wrath. But Miss Hester knew it was hopeless to argue: Frances mother would like it though it was sure man to avoid Miss Hester's wrath. But Miss Hester knew it was hopeless to argue; Frances did always have her own way, after all, and there were other obstacles in the path more annoying than Miss Hester's objections. Indeed these obstacles were something of a red rag for Miss Hester, and roused even in her an active interest in the question, which before bad disgusted her, shall Miss Frances vote? Certainly, if Miss Frances wanted to vote, and the law said she might, why should she not? Some of the newspapers said she must have her name registered directly, if she wanted to vote in December. Others said she could not be registered till she paid her taxes.

But she was sure i mother would like it, though it was differ to the way she had planned. Aunt Fanny she her head, she was sure it was all her of fault; she ought to have managed better, a lave insisted on Lily's going more with July said, much injured. "It was not lift was n HARNESS SHOP must have her name registered directly, if she wanted to vote in December. Others said she could not be registered till she paid her taxes. But she could not pay her tax till she had been assessed before September 15th, or other authorities said, but she could not be registered till after then. Then should she vote in Swanset, or in Boston? Miss Hester thought she ought to vote in Swanset, and accompanied Miss Frances on a visit to the town-clerk to inquire about the law. But when she found the town-clerk he declared he could not tell when Miss Frances ought to be assessed, or ed up and down. Sometimes it seemed to see up and down. Sometimes it seemed to ed up and down. Sometimes it seemed to see up and down. Riding Bridles, Saddles, Whips when Miss Frances ought to be assessed, or whether she ought to be assessed, or whether she ought to be assessed before she was registered, or if it would do to wait till the fall, or where she ought to be registered, and said, "Maybe they'd know at the city hall."

Miss Hester indignantly pulled her sister out.

"If he's such a born fool, there's no sort of the propagation by the propagation of the propagati BED ROCK PRICES FOR CASH. All Work Guaranteed or Exchanged. "The Taylors and the Morses have got the use in encouraging him to think you'll patronize him so far as to vote in Swanset. You are right. You are living in Boston, and we might as well go into the city hall to inquire about the voting." It was necessary to have answers to these questions soon, for it was now June, and Miss Frances was to accompany her neices to the seashere, way down on Passamaquoddy, in Maine, and they would not be back till October. Then father and mother were going abroad, and aunt Fanny was to matronize the girls in this quiet seaside place. It was true that she must be assessed before September 15th, it must be done this very week, as the next week she would be gone for the summer.

"The Taylors and the Morses have got the tax-bills, but nothing has come for you!" we her first startling piece of intelligence. I next was still more startling. Miss Hes minded about the law, "said Miss Hester, felt it was time for the women to do someth about it. But the worst of it is, that ridicula to we hether I have a right to you have a steady the last seventeen years. He thinks can find out the day of the election, and I me to be there!"

So the matter was still undecided. Me Frances had not got her tax-bill, though a LOOK FOR THE BIG COLLAR! SE SALAMANDER FELTING Covering Boilers, Steam Pipes

out from Boston to spend the summer we her. There was this advantage in M Hester's living in Swanset, that she could to about her friends coming into the country stay with her, while if they came to stay we Miss Frances, they could hardly say they to left town.

left town.

Miss Hester accompanied Miss Frances I town. She did not think it would do to town. She did not think it would do to her go to the city hall alone. Indeed, she mot prove an infallible guide herself, for it went first to the State house, by mistake. I they met with a gentlemanly official, w gave them their right direction. Another the mistake led them into the court-house the back of the city hall, and they came in hear decrease in a microscenic and include the mistake of the city hall, and they came in a microscenic and include the mistake of the city hall, and they came in a microscenic analysis. being dragged in as witnesses in a pickpoc case that was being tried in the police co case that was being tried in the police cor But at last they were ushered into the pro-room in the city hall, under the escort of policeman. Here all went well. Miss Hes-did all the telling at the control of the co

Alchemy and Chemistry.

LECTURE REPORE THE ACADEMY OF SCIENCES BY PROP. BOLTON, OF TRINITY.

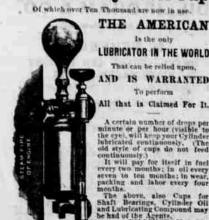

The winter course of seven lectures befor the New York Academy of Sciences, at No 12 West Thirty-first street, was inaugurated recently by Prof. H. Carrington Bolton, of Trinity College, Hartford, who discussed the subject of alchemy and chemistry, illustrating his remarks with the stereopticon. The small lecture room of the Academy was filled with ladies and gentlemen, mostly members of the Society, who listened with intelligent appre-ciation to a very interesting lecture. The Society, who listened with intelligent appreciation to a very interesting lecture. The speaker traced the origin of chemistry to alchemy, and gave a long list of names of those who had been ideutified with the early days of alchemy. He also presented the portraits, through the stereopticon, of many who had been distinguished in their search for the philosopher's stone and the citair of life, with those of a later day, who had placed chemistry those of a later day, who had placed chemistry on a scientific basis.

on a scientific basis.

The lecturer began by saying that according to an ancient proverb, alchemy was an art, begun in labor, continued in deceit and ending in penury. It had also been held to be the father of chemistry. It had been enveloped in superstitions and unaccountable phenomena. The doctrines of the alchemist had been con-sidered akin to the black art. The search for gold was the stimulating power which impel-led the ancient philosophers in their costly ex-periments. The philosopher's stone was also the object of their search. This mythical sub-stance had been described as a solid body of stance had been described as a solid body of the color of a ruby, transparent, flexible, and yet as brittle as glass. Ripely, the English alchemist, gave an account of various acids with which he had experimented, together with salts. He was something more than a necro-mancer, and warned his disciples against certain elements, but failed to give an account of the result of his efforts, which he claimed had been successful. The first written words of the result of his efforts, which be claimed had been successful. The first written words of alchemy proceed from Arabic sources. In the eighth century, when the Arabians had made their Eastern conquests, they cultivated philosophy, art, literature, and the sciences, and laid the foundation of chemistry. The lecturer produced a portrait of Gaba, an eminent Arabian alchemist, which he informed the audience could not by any means be a correct likeness, us at the time in which he lived it was against the religious faith of the lived it was against the religious faith of the Arabians to copy the human face. Gaba was followed by many of his own race, who be-came also eminent in chemistry. They defined chemistry as the scienc of combustion. Albertus Magnus, born in 1193, was a Dominical monk who devoted himself to mediæval science, astronomy, alchemy and necromancy. He died in 1282. Finding that his ecclesiastical duties interfered with the pursuit of science he resigned his sacred office, and gave himself up to his srt. He was said to be great in magic, greater in philosophy, but greatest in theology. Others were accounted great alchem-ists in their time. To Flammel is attributed the art of making gold out of baser metals, a secret which he claimed to have discovered about noon on January 17, 1314. Pharaselsus introduced chemical elements into the science introduced chemical elements into the science of medicine, and claimed that the province of chemistry and alchemy was not to discover gold, but to compound medicines for the cure of diseases. Hermes Trismegistus first taught the Egyptians writing, astronomy, mathematics, and other sciences. Some emblematical pictures were exhibited by the lecturer signifying the fusion of metals. A wolf devouring a King signified the fusion of antimony with gold. A King on his throne swallowing his son stood for the fusion of gold with some baser metal. The use of the blow-pipe and other methods of the ancients showed that they were familiar with many processes now employed. Among other pictures shown was one representing the magician in art, with the King, his patron, and the dignataries of the court. Another represented the interior of a laboratory in the sixteenth century, in which was shown the process of the distillation of vapors. In ancient times chemical science ex-isted side by side with the superstitions of

In the pursuit of the mysteries of alchemy In the pursuit of the mysteries of alchemy some experimenters threw off the trifling deceptions surrounding the art and devoted themselves to the legitimate pursuit of chemistry. The writings of John Becker were referred to and his picture was shown to the audience. He was born in 1635. His father was a learned Lutheran clergyman, who died when John was very young — about the close of the Thirty Year's War, leaving his son an inheritance of poverty. John Becker connected all known chemical facts, and deduced from them one general principle. Joseph Priestley was born general principle. Joseph Priestley was born in 1733, near Leeds, England, and developed a taste for science and languages at a very early age. He mastered Latin, Greek, Hebrew, French, Italian, and the Chaldee, Syriac, and Arabian languages. He studied for the min-istry, and for recreation turned to natural phil-esophy and chemistry. He discovered a number of gases, such as oxygen, nitrous exide, hydrochloric acid, and others. He did much to advance the science of chemistry, and to strip it of the mysteries which had formerly surrounded it. In concluding his remarks the speaker said that alchemy was worthy of free recognition for what it had done. Alchemists, through their researches and experiments, had conferred lasting obligations upon posterity. They had accumulated a mass of evidence without which later investigators would have labored in great difficulty. He thought the scientists of this day might hope that the peo-ple of the next century would look back upon the present state of learning and investigation and see as much progress from our stand-point as we could see from the days of the past of which he had spoken.

NOENGINE American Cylinder Cup

LUBRICATOR IN THE WORLD That can be relied upon. AND IS WARRANTED To perform All that is Claimed For It.
